AAF71753 to AAF72330 encode the Corynebacterium glutamicum metabolic pathway (MP) proteins given in AAB79634 to AAB80211. The C. glutamicum MP nucleic acids are useful for the production of fine chemicals in microorganisms, including organic acids, nonproteinogenic amino acids, purine and pyrimidine bases, nucleosides, nucleotides, libids, saturated and unsaturated fatty acids, diols, carbohydrates, aromatic compounds, vitamins, cofactors, polyketides and enzymes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   pathway proteins, useful for producing fine chemicals in microorganisms, including organic acids, nonproteinogenic amino acids, and purine and pyrimidine bases -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Nucleic acids from Corynebacterium glutamicum encoding metabolic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to proteins encoded by the benzothiophene oxidase (bto) gene cluster from Pseudomonas sp. WF505, specifically the protein which controls expression of the gene cluster (AAV97827), the benzothiophene oxidase (bto) enzyme itself (AAV97825) and a benzothiophene oxidase co-enzyme (AAV97824), which controls benzothiophene activity via redox regulation. These enzymes are benzothiophene activity via redox regulation. These enzymes are respectively encoded by the bto gene cluster open reading frames ORF2-16 (AAA38398), ORF4-9 (AAA38395) and vectors comprising the genes encoding these proteins, hosts containing such constructs and the recombinant production of the enzymes. Pseudomonas sp. WF505 benzothiophene oxidase, benzothiophene oxidase, co-enzyme and bto gene cluster regulator are useful in the desulfurisation of crude oil and petroleum products, and for the clarification of soil and waste water contaminated by organic sulphur compounds. Sequences AAY97819-Y97829 represent the proteins encoded by the genes of the Pseudomonas sp. WF505 benzothiophene oxidase

The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel polynucleotides derived from Coryneform bacteria, for identifying mutation point of a gene, measuring expression of a gene, analysing expression profile or pattern of a gene and identifying homologous gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

The assay can be used to identify fragments pref. transmembrane fragments, from G-protein coupled receptor (GPR) proteins (see AAR48686-R48758 for examples) which retain biological activity such as binding a GPR ligand or modulating GPR ligand binding to a GPR (see AAR48759-R48758, AAR50569-R50807 and AAR89189-R48758, CONTRAGATOR CONT
                         transmembrane domains of adrenergic receptors, used in a G-protein coupled receptor ligand binding assay. The assay can be used to outled the used to coupled receptor (GPR) proteins (see AAR48686-R48758 for examples) which retain bilological activity such as binding a GPR ligand or modulating GPR ligand binding to a GPR (see AAR48758, AAR50569-R50807 and AAR89189-R89195 for examples of polypeptide fragments). The polypeptide fragments can be used in compositions for treating subjects suffering from a pathology related to a GPR abnormality e.g. a psychotic disorder such as schizophrenia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                psychotic disorder; schizophrenia; dopamine; camp; adenosine; thrombin; muscarinic acetylcholine; adrenergic; endothelin; bombesin; endocrine; rhodopsin; opsin; odorant; cytomegalovirus; serotonergic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Peptides AAR50808-14 are peptides based on serotonergic receptor (5-HT)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   G-protein coupled receptor; ligand binding assay; transmembrane domain;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
   The sequence of a polypeptide, based on the consensus sequence from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Polypeptides of G-coupled receptor proteins (GPRs) - useful for binding GPR ligands or modulating GPR binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           G-protein coupled serotonergic receptor consensus sequence #4.

The assay can be used to identify fragments pref. transmembrane fragments, from G-protein coupled receptor (GPR) proteins (AAW02657-W02730) which retain biological activity such as binding a GPR ligand or modulating GPR ligand binding to a GPR (see AAW02747-W0299) for examples of polypeptide fragments). The polypeptide fragments can be used in compositions for treating subjects suffering from a pathology related to a GPR abnormality e.g. a psychotic disorder
                                                                                                                                                                                           G-protein coupled receptor; ligand binding assay; transmembrane domain; schizophrenia; dopamine; cAMP; adenosine; thrombin; adrenergic; opsin; muscarinic acetylcholine; endothelin; bombesin; endocrine; rhodopsin; odcant; cytomegalovirus; serotonergic.
                                                                                                                                                                 G-protein coupled serotonergic (5-HT) receptor consensus sequence #4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New dopamine receptor peptide – useful as antipsychotic agent, e.g. for treating schizophrenia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  0;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAY34584-Y35879 represent the proteins encoded by all the open reading frames in the complete genome (see AAX91990) of chlamydia pneumoniae. C. pneumoniae causes respiratory diseases such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent citis media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see AAY34584-Y35879) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae nucleotides sequences can also be used as immunogenic compositions, especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.
                                                                                                             Respiratory disease; pneumonia; bronchitis; heart disease; sarcoidosis; sinusitis; purulent otitis media; erythema nodosum; pharyngitis; vaccine; neutralising epitope.

Patent No. 5783195
GENERAL INFORMATION:
APPLICANT: Cochran, Mark D
APPLICANT: Macdonald, Richard D.
APPLICANT: Macdonald, Richard D.
TITLE OF INVENTION: Recombinant Infectious Bovine
TITLE OF INVENTION: Rhinotracheitis Virus S-IBR-052 And Uses Thereof
NUMBER OF SEQUENCES: 99
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                  Length 369;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Length 369;

STATE: USA
                                                                                                                                           CUP: 10036
COMPUTER REARABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PAtentIn Release #1.0, Version #1.25
SOFTWARE: PAPLICATION DATE:
APPLICATION NUMBER: US/08/191,866D
FILING DATE: 4 February 1994
FILING DATE: 4 February 1994
CLASSIFICATION: 435
ATTORNEY/AGENT INFORMATION:
NAME: White, John P.
REGISTRATION NUMBER: 28,678
TELECOMMULICATION INFORMATION:
TELEPHONE: (212) 391-0525
TELEX: (212) 391-0525
TELEX: (212) 391-0525
TELEX: 412523
INFORMATION FOR SED ID NO: 21:
SEQUENCE CHARACTERISTICS:
LENGTH: 441 and no acids
TYPE: amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 COMPUTER READABLE FORM:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 29, Application US/08975080

Sequence 29, Application US/08975080

GENERAL INFORMATION:
APPLICANT: Altierl, Dario C.
TITLE OF INVENTION: SURVIVIN, A PROTEIN THAT INHIBITS
TITLE OF INVENTION: CELLULAR APOPTOSIS, AND ITS MODULATION
NUMBER OF SEQUENCES: 35
CORRESPONDENCE ADDRESS:
ADDRESSEE: MORGAN, LEWIS & BOCKIUS LLP
STREET: 1800 M Street, N.W.
CITY: Washington
STATE: D.C.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ;

Malternate names: IMP: Chinese hamster
IMP dehydrogenase (EC 1.1.1.205) - Chinese hamster
Nalternate names: IMP: NaD+ oxidoreductase; IMPDH; inosine-5'-monophosphate dehydroge
C; Species: Cricetulus griseus (Chinese hamster)
C; Date: 13-Nov-1998 #sequence_revision 13-Nov-1998 #text_change 05-May-2000
C; Accession: B31997
R; Collart, F.R.; Huberman, E.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  A Map position: 7431.3-7432

C; Function:
A; Description: catalyzes the oxidation of inosine 5'-phosphate by NAD and one molecule C
A; Perscription: catalyzes the oxidation of inosine 5'-phosphate by NAD and one molecule C
A; Pathway: purine nucleotide biosynthesis
C; Superfamily: IMP dehydrogenase: CBS homology; IMP dehydrogenase amino-terminal homolog
C; Keywords: duplication: GMP biosynthesis; NAD; oxidoreductase; purine nucleotide biosynthesis and the control of 
                                                                                                                                                                                                                   IMP dehydrogenase (EC 1.1.1.205) I - human
N;Alternate names: IMP:NAD+ oxidoreductase; IMPDH; inosine-5'-monophosphate dehydrogenas
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A;Note: the sequence in GenBank entry HUMIMPH, release 103, (PID:9307067) has 273-Phe, 2
C;Comment: mRNA for IMP dehydrogenase I predominated in normal leukocytes, whereas that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ô

IMP dehydrogenase (EC 1.1.1.205) impdh - fruit fly (Drosophila melanogaster)
N.Alternate names: IMP:NAD+ oxidoreductase; IMPDH; inosine-5'-monophosphate dehydroge
C;Species: Drosophila melanogaster
C;Date: 13-Nov-1998 #sequence_revision 13-Nov-1998 #text_change 05-May-2000
C;Accession: S41064; S61482
R;Sifri, C.D.; Wilson, K.; Smollk, S.; Forte, M.; Ullman, B.
Biochim. Biophys. Acta 1217, 103-106, 1994
A;Title: Cloning and sequence analysis of a Drosophila melanogaster cDNA encoding IMP
A;Reference number: S41064; WUID:94114565

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          JT0565

With dehydrogenase (EC 1.1.1.205) - mouse
N'Alternate names: IMP:NAD+ oxidoreductase; IMPDH; inosine-5'-monophosphate dehydrogenas
C;Species: Mus musculus (house mouse)
C;Date: 13-Nov-1998 #sequence_revision 13-Nov-1998 #text_change 05-May-2000
C;Accession: JT0565; A34375; S42724

IMP dehydrogenase (EC 1.1.1.205) YML056c - yeast (Saccharomyces cerevisiae)
N;Alternate names: inosine 5'-monophosphate dehydrogenase (IMPDH); protein YM9958.06c
C;Specias: Saccharomyces cerevisiae
C;Date: 13-Nov-1998 #sequence_revision 13-Nov-1998 #text_change 21-Jul-2000
C;Accession: S50890
R;Devlin, K.; Churcher, C.
R;Devlin, K.; Churcher, C.
A;Reference number: S49800
A;Accession: S50890
A Description: catalyzes the oxidation of inosine 5'-phosphate by NAD and one molecul A; Pathway: purine nucleotide biosynthesis
C; Superfamily: IMP dehydrogenase; CBS homology; IMP dehydrogenase amino-terminal homo C; Reywords: GMP biosynthesis; NAD; Oxidoreductase; purine nucleotide biosynthesis F;37-103/Domain: IMP dehydrogenase amino-terminal homology <IDHN>
F;235-Qmain: BS homology <CBS>
F;236-484/Domain: IMP dehydrogenase catalytic homology <IDHC>
F;335-Active site: Cys #status predicted

A;Description: catalyzes the oxidation of inosine 5'-phosphate by NAD and one molecul
A;Pathway: purine nucleotide biosynthesis
C;Superfamily: IMP dehydrogenase; CBS homology; IMP dehydrogenase amino-terminal homo
C;Reywords: GMP biosynthesis; NAD; oxidoreductase; purine nucleotide biosynthesis
F;38-104/Domain: IMP dehydrogenase amino-terminal homology <IDHN>
F;237-485/Domain: BMP dehydrogenase catalytic homology <IDHC>
F;336/Active site: Cys #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  C;Species: Bacillus cereus

C; Comment: This sequence is very similar to IMP dehydrogenase at the amino end
ke the latter, the two CBS domains are missing or degenerate.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             RESULT 22
S54810
probable exygenase - Streptomyces fradiae
C;Species: Streptomyces fradiae
C;Date: 08-Jul-1995 #sequence_revision 21-Jul-1995 #text_change 24-Sep-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

A Description: catalyzes the oxidation of inosine 5'-phosphate by NAD and one molecul A; Pathway: purine nucleotide biosynthesis C; Superfamily: IMP dehydrogenase; CBS homology; IMP dehydrogenase amino-terminal homo C; Keywords: GMP biosynthesis; NAD; oxidoreductase; purine nucleotide biosynthesis F; 26-92/Domain: IMP dehydrogenase amino-terminal homology <IDHN>
          J. Biol. Chem. 269, 28979-28987, 1994
Afrittle: Amplification of the inosinate dehydrogenase gene in Trypanosoma brucel gamb
A; Reference number: A55407; MUID:95050714
A; Accession: A55407

A;Tille: Sequence and analysis of Chromosome I of the plant Arabidopsis.

A;Accession: H96792
                                   A Description: catalyzes oxidation of glycolate to glyoxylate and hydrogen peroxide A; Pathway: photorespiratory pathway (S; Pathway): (S)-2-hydroxy-acid oxidase homology (S; Reywords: flavoprotein; FMN; oxidoreductase; photorespiration F; 1-212/Domain: (S)-2-hydroxy-acid oxidase homology (fragment) < 2HY> F; 1-212/Domain: (S)-2-hydroxy-acid oxidase homology (fragment) < 2HY>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    A;Cross-references: EMBL:X92888; NID:g1063399; PIDN:CAA63482.1; PID:g1063400
